

software solutions

Coptis™

Press release April 2018

Coptis Lab, a proactive comprehensive solution to optimize your project development!

Coptis Lab is the industry's software designed specifically for cosmetics product formulations, regulatory and now safety.

Coptis Lab enables cosmetic formulators to efficiently manage development projects and improve the quality and reliability of information. Coptis Lab automates formulation comparisons, trial price calculation, regulatory & blacklist alerts, tests reports, ingredients list and PIF. Coptis Lab is further enhanced with an integrated Global Regulatory database for INCI restrictions and a Cosmetic Supplier Raw Materials database.

The Coptis solutions now include Coptis Tox, a toxicological database of more than 2,000 substances to automatically generate the report of the toxicological profile of substances and the formula and calculate the Margin of Safety (MoS) for each ingredient in the formula. This allows the evaluation of the safety of your raw materials and finished products from the initial steps of the product development.

The results of using Coptis Lab will be reducing time-to-market with utmost reliability of information and to increase ROI.
